Visualization (Vis)

Key Insights – Scandinavian World Heritage Sites (Part 1)

You are working on a self-initiated data visualization project. Here is what you are currently at:

- Motivating Curiosity: The World Heritage Sites in Scandinavia?
- Intended Effect: to be defined
- Function: Explain
- Audience: to be defined

Data: you found a small dataset of the world heritage sites (whs) in Scandinavia (remember, Scandinavia consists of the three countries Norway, Denmark and Sweden). Here is the full dataset:

Country	Year	Number of World Heritage Sites
Norway	2004	5
Denmark	2004	4
Sweden	2004	13
Norway	2022	8
Denmark	2022	10
Sweden	2022	15

As you have not defined the Intended Effect and Audience of your vis project yet, you decide to work on these by first thinking about the key insights you can derive from this data.

The first thing you notice is that "Sweden stayed the country with the most sites".

Exercise:

Derive at least 3 additional key insights from this dataset.

Hint: there are at least 5 more valuable insights.
